

Jacky Huynh

Feasterville-Trevose, PA | (267) 629-4128 | jthuynh06@gmail.com | linkedin.com/in/jackyhuynh-me/

EDUCATION

Temple University, College of Engineering

Bachelor of Science in Mechanical Engineering

Courses: Solid Mechanics, Material Science, Machine Theory & Design, Fluid Mechanics, Thermodynamics, Vibrations, Dynamics, CAD

WORK EXPERIENCE

Business Operations Manager, My Beloved Lash - Levittown, PA

Nov. 2021 – May 2026

- Recruited, interviewed, hired, and onboarded 8 technicians and 2 front desk employees
- Coordinated scheduling, payroll, customer records, and daily administrative operations for a team of 6 employees
- Maintained client records, appointment histories, and service documentation while providing customer support
- Sourced, evaluated, and maintained relationships with suppliers to support business operations and inventory needs
- Communicated with suppliers regarding product availability, pricing, order coordination, and lead times
- Purchased products from suppliers, scheduling shipments accordingly to maintain healthy supply inventory
- Prepared and maintained records, financial reports, and operational data using Excel, QuickBooks, and Square
- Developed the business website, integrating an online booking platform to improve scheduling efficiency
- Oversaw and coordinated a commercial build-out project, managing zoning, inspections, permitting, and contractors

Supply Chain Operations Associate, McMaster-Carr - Robbinsville, NJ

Feb. 2020 – Mar. 2022

- Managed material traceability documentation to maintain sourcing records and customer verification
- Processed custom material orders by cutting stock materials to specified dimensions
- Interpreted order specifications and verified material requirements to ensure accurate product fulfillment
- Fulfilled 600–800 customer orders daily while maintaining 96–100% quarterly accuracy

Ergonomic Coach, McMaster-Carr - Robbinsville, NJ

May 2021 – Mar. 2022

- Provided real-time operational & safety feedback to employees to improve workplace performance and compliance
- Onboarded 3–6 employees monthly into company safety and ergonomics programs
- Collaborated with teams across 4 company branches to improve operational consistency and safety programs

PROJECT EXPERIENCE

Leader for University Design Project (Leadership and Teamwork)

- Led a cross-functional team of 5 engineers (2 ME, 2 EE, 1 SE) through a senior design project
- Defined project scope, goals, and timelines; strategically delegated tasks based on individual strengths
- Facilitated weekly meetings to track progress, resolve issues, and maintain team alignment

Propellers for an Autonomous Boat (Design, Test, and Fabrication)

- Designed and iterated propeller geometries in Solidworks to improve performance
- Utilized Solidworks Flow Simulation to analyze fluid dynamics and optimize efficiency
- 3D printed and tested top-performing designs, validating performance in real-world conditions

Water Resistant LiDAR Camera Casing and Elevated Mount (Design and Fabrication)

- Designed a laser-cut enclosure and mounting system for a LiDAR camera using AutoCAD
- Laser-cut and assembled acrylic components using solvent bonding to achieve water-resistant sealing

Boat Propulsion System (Analysis, Procurement, and Assembly)

- Performed dynamic analysis to select batteries, motors, and shafts, optimizing velocity within budget constraints
- Procured and integrated propulsion components, assembling a fully functional system validated through testing

C-Clamp CAD Model and Single Point of Failure Analysis (FEA)

- Reconstructed a 1:1 CAD model of a C-clamp using Solidworks and precision measurements
- Simulated stress conditions using Solidworks Simulation to evaluate structural performance
- Identified the single point of failure through finite element analysis (FEA), informing design improvements

Mini Forklift Design and Assembly (Design, Analysis, and Build)

- Designed a functional mini forklift using standard mechanical components modeled in Solidworks
- Performed torque and gear calculations in Matlab to ensure the system could lift a 10 lb load
- Assembled and validated the system, confirming lifting capability and mechanical performance

SKILLS

CAD/Design: Solidworks, AutoCAD, SketchUp

Additional Tools: Excel, MS Office, basic MATLAB, basic Python
